1 System Description

This is a *Freelancing Management System*, a system which allows *Customers* and *Freelancers* to find one-another easily. It manages the processes from finding workers, verifying them, engaging, paying up to rating. Let us take you on an interesting tour into the *system actors*, every one of them sees the system differently according to their role.

2 System Actors

2.1 Root

The Root is the owner of the system. He is the one who set it up for the first time with a special root access from him. The Root also specifies the system settings like penalties, bonuses on the rate and ratio of the profit on each Employer-Freelancer deal. Besides, He add *Admins* to manage the system.

2.2 Admin

Admins are the managers of the system. They have *The managers access* over the hole system, they can *delete* or *ban* any consumer account. Also, They can view some Statistics like the number of the Employers and Freelancer. They can *Receive* and *Reply Complaints* of the consumers as well. Admins can view reports about the system i.e *economic, consumers, blocked, ...* reports.

2.3 Freelancer

Freelancers are the workers of the system. Every one them have an *Profile* where he can share his experience, and work examples. His *Profile* contains enough information so that the Employer can decide wherever he is going to invest in that *freelancer* or not. There is a *Rate* in the *Freelancers Profile* is computed with very accurate algorithms based on the *Employers Feedback* and how commitment is the Freelancer! *Freelancer* are paid per hour, and it is in the *profile*. A *Freelancer* can review the *Employers' Profiles* and their *Tasks* which they can apply for it and make special offers for the *Employers*.

2.4 Employer

Employer are the stockholders. They also have their *profiles*. An *Employer* can create a *Task* or a *list of tasks* seen by interested *Freelancers*. Then the *Employer* can choose the best *Freelancer* among who applied. Once the *Employer* accepts the *offer* the money is *withdrawn* from his account to the pending state in the system. After the *task* is finished, the *Employer* can *rate* and *feedback* the *freelancer*, and sure the freelancer is paid.

3 Diagrams

4 Use Case – *in detail*

4.1 Access Root

Use Case Name	<i>Root Access</i>
Actors	<i>Root — Exclusively</i>
Pre-condition	<i>1. At configuration time for the very first use. 2. Root is given a default password.</i>
Basic Flow	<i>1. Open the System 2. Enter ‘root’ in the user name text box 3. Enter ‘0000’ in the password text box</i>
Post-condition	<i>have full control of FMS settings</i>

4.2 Specify Penalties

Use Case Name	<i>Specify Penalties</i>
Actors	<i>Root — Exclusively</i>
Pre-condition	<i>Root Access</i>
Basic Flow	<i>1. Open the system with the Root Access 2. Click on Specifies Penalties 3. Fill the Data 4. Click submit</i>
Post-condition	<i>Penalties is configurted</i>

4.3 Add Admin

Use Case Name	<i>Add Admin</i>
Actors	<i>Root — Exclusively</i>
Pre-condition	<i>Root Access</i>
Basic Flow	<i>1. Open the system with the Root Access 2. Click Add Admin 3. Specify its data 4. Click submit</i>
Post-condition	<i>Admin is added</i>

4.4 Remove Admin

Use Case Name	<i>Remove Admin</i>
Actors	<i>Root — Exclusively</i>
Pre-condition	<i>Root Access</i>
Basic Flow	<i>1. Open the system with the Root Access 2. Click Remove Admin 3. Choose the Admin [drop down list 4. Click submit</i>
Post-condition	<i>Admin is removed</i>

4.5 Block Admin

Use Case Name	<i>Block Admin</i>
Actors	<i>Root — Exclusively</i>
Pre-condition	<i>Root Access</i>
Basic Flow	<i>1. Open the system with the Root Access 2. Click Block Admin 3. Choose the Admin [drop down list 4. Click submit</i>
Post-condition	<i>Addmin is removed and is put in the block list</i>

4.6 Unblock Admin

Use Case Name	<i>Unblock Admin</i>
Actors	<i>Root — Exclusively</i>
Pre-condition	<i>Root Access</i>
Basic Flow	<i>1. Open the system with the Root Access 2. Click Unblock Admin 3. Choose the Admin [drop down list 4. Click submit</i>
Post-condition
